Subject: Associated Press seeks info on oil saltwater

Hello, Nathan:

I am an Associated Press environmental reporter and am working with colleagues on covering the aftermath of an oil saltwater/brine spill in North Dakota. I'm exploring a number of reporting angles regarding saltwater and its handling, and was hoping you could provide some information. Could you spare a few minutes today for a phone call to discuss? I'd greatly appreciate the help.

Thanks and regards,

John Flesher

Hi Rich and Mark,

I forwarded this email to Dayna Gibbons in HQ and I believe she has forwarded this to HQ press office. Keeping R8 interests in the loop too. I don't have specific knowledge of the incident. Based on a VM I deleted by mistake, I think the reporter wishes to understand the regulatory requirements on pipelines carrying oilfield salt water. I would end up passing him to the State of ND for such answers, if the question concerns pipelines.

Subject: ND brine spill situation

Fyi. In case this ND spill story remains active tomorrow. My current understanding is that brine from the spill has in fact reached the bay, and vacuuming is underway. I also understand that results related to the sampling at drinking water system should be available tomorrow. I would expect the Tribes will be the lead on communicating that but not entirely sure.

See link below for Tribe release.

Key players are:

Sarah Bahrman

Pete Stevenson OSC- cell- 303-886-1639;

Glenda Embry, spokesperson for the Tribe- 701-627-8242

Sandy Stavnes has also been in the loop on this.

Subject: RE: Press Inquiry

Hi Alison, the Tribes will be the best source for current information. Here's what I have in terms of status from early this am.

EPA is supporting the Tribes as they lead assessment and cleanup activities at the spill site. There are several parties involved in response activities. The most recent spill estimate is 24,000 barrels of brine and condensate. The majority of the spill is pooled on the ground, soaked into the soil, and contained behind beaver dams in a nearby draw. The line has been shut down and steps have been taken to contain the discharge in the draw, including the placement of boom material at the mouth of the draw. Currently, the primary concern is the high salinity of the discharge and impacts on soil, vegetation and water in the draw. Cleanup efforts will focus on pumping and flushing fresh water through a series of beaver ponds along the draw. We have no confirmed reports of brine reaching the bay or lake, however, additional assessments are taking place today.

Hi Rich,

I was wondering if you had any information you could share about the saltwater pipeline spill at the Fort Berthold Reservation earlier this week?

Thanks very much,

Alison Sider
